PROTHROMBIN TIME STUDIES

(Photo optical Clot Detection)

Mean Normal Prothrombin Time (PT)	10.20	sec	
Patient value	10.00	sec	8.67 - 11.82
Prothrombin Ratio (PR)	0.98		
International Normalized Ratio (INR)	1.00		0.90 - 1.10

Note

1. INR is the parameter of choice in monitoring adequacy of oral anticoagulant therapy. Appropriate therapeutic range varies with the disease and treatment intensity
2. Prolonged INR suggests potential bleeding disorder / bleeding complications
3. Results should be clinically correlated
4. Test conducted on Citrated plasma

Recommended Therapeutic range for Oral Anticoagulant therapy

INR 2.0-3.0 :

- Treatment of Venous thrombosis & Pulmonary embolism
- Prophylaxis of Venous thrombosis (High risk surgery)
- Prevention of systemic embolism in tissue heart valves, AML, Valvular heart disease & Atrial fibrillation
- Bileaflet mechanical valve in aortic position

INR 2.5-3.5:

- Mechanical prosthetic valves
- Systemic recurrent emboli

Comments

Prothrombin time measures the extrinsic coagulation pathway which consists of activated Factor VII (VIIa), Tissue factor and Proteins of the common pathway (Factors X, V, II & Fibrinogen). This assay is used to control long term oral anticoagulant therapy, evaluation of liver function & to evaluate coagulation disorders

HIV 1 & 2 ANTIBODIES SCREENING TEST, SERUM			

Final Result : Negative

HIV 1/2 BY FLOW THROUGH IMMUNOFILTRATION

()

Result:	HIV 1	Negative
	HIV 2	Negative

Comments

As per NACO guidelines on HIV testing, Strategy III has been adopted to report on HIV test samples. The patient sample is tested for HIV antibodies using 3 different methods.

Interpretation

Negative result implies that antibodies to HIV have not been detected in the sample by two of the three methods used. This means the patient has either not been exposed to HIV 1/2 infection or the sample has been tested during the "window phase" i.e. before the development of detectable levels of antibodies. Hence a Negative result does not exclude the possibility of exposure or infection with HIV 1/2.

Recommendations

1. Results to be clinically correlated.
2. Rarely false negativity/positivity may occur.
3. Post test counseling available between 9.00 am to 5:00 pm at LPL laboratories
